Parts cleaning brush sets are stiff, varied brushes for scrubbing parts, threads, bores and crevices during cleaning and restoration, with brass, steel and nylon bristles matched to delicate and tough jobs.

Key Features

- Stiff nylon and steel bristles
- Brass brushes for soft metals
- Long reach and detail brushes
- Thread and bore brushes
- Washable handles

Typical Uses in the Workshop

- Scrub parts in degreaser tanks
- Clean threads, bores and corners
- Remove rust, scale and carbon
- Detail clean before assembly

Safe Operation

1. Select the brush for the material
2. Dip in the cleaning solution
3. Scrub with the grain of the detail
4. Rinse and dry the part
5. Clean the brush after use

SAFETY NOTES

- Wear gloves when working in solvents
- Brass and steel bristles can scratch - choose carefully
- Keep brushes clear of the face
- Do not clean live electronics
- Store brushes bristle-down

Maintenance & Consumables

- Rinse brushes after use
- Check for loose bristles
- Dry before storage
- Replace worn brushes
- Keep the set sorted by stiffness

Specification & Buying Notes

A multi-pack of nylon, brass and steel brushes with a holder covers parts cleaning. Quality ferrules hold bristles; cheap brushes shed in the parts.
