Wheeled spill kit bins store absorbents, protective gear and disposal bags for bigger or chemical spills, moving the whole response to the scene quickly. A well-stocked wheeled bin covers the workshop, stores and yard from one mobile dock.

Key Features

- Wheeled lidded bins
- Compartmented for pads, socks and gloves
- Chemical and oil response contents
- Refillable contents packs
- Labels and contents lists

Typical Uses in the Workshop

- Respond to large spills anywhere on site
- Store and move absorbent stocks
- Chemical area coverage
- Training and drill response

Safe Operation

1. Roll the bin to the spill scene
2. Use the contents per the list
3. Contain, absorb and bag the spill waste
4. Refill the bin after use
5. Return it to its docking point

SAFETY NOTES

- Check the contents match the chemicals on site
- Replace used contents immediately
- Wear the gloves and goggles from the kit
- Dispose of spill waste as hazardous
- Keep the bin accessible and unlocked in use

Maintenance & Consumables

- Audit the contents monthly
- Replace expired items
- Check the wheels and lid
- Refill after any spill or incident
- Train users on the contents

Specification & Buying Notes

A wheeled spill bin with oil and universal contents, gloves and bags suits workshop scale. Quality bins hold the kit clean and dry. Buy refill packs with the bin.
